Users create and edit the digital models for building designs. The software is used by architects, civil engineers, mechanical engineers, industrial designers, landscape architects, interior designers, mechanical, electrical, plumbing (MEP) contractors, geologists, farmers, urban planners, real estate developers, contractors, and other professionals in the building and construction industry. CAD users can also use the software to create maps, graphics, technical drawings, or 3D printing designs. AutoCAD is used as a subfield of computer-aided design (CAD). Other subfields of CAD are computer-aided drafting (CAD/CAM), computer-aided design (CAD/CAE), computer-aided manufacturing (CAM), and computer-aided engineering (CAE). Many software packages are marketed as CAD, but some may also do other things such as produce graphics, or paint or simulate models. AutoCAD is the most frequently used 2D design software in the world. History AutoCAD was first developed by Ron Bajema of M.A.I.D. Corporation. It was originally called AutoPlane and was an exact clone of another CAD program called EDFACPRO. Both programs were developed on an 80286 processor. The first version of AutoCAD was released in December 1982 on personal computers running MS-DOS, CP/M, or SCO Unix. The initial development team was composed of Bajema, Tom Acitelli, and Wayne Barnes. Acitelli was the first employee, while Barnes was the chairman of the board. With the release of AutoCAD in 1982, the first widespread use of a computer-aided design (CAD) system occurred. Before 1982, most commercial CAD programs ran on minicomputers or mainframe computers with terminals to be used by individual CAD operators. In 1987, Autodesk acquired the rights to the AutoCAD name, and renamed it AutoCAD. In 1989, Acitelli was joined by partner Bob Russell. Russell was a prominent environmental designer and architect in Michigan. In the 1990s, software was developed that allowed AutoCAD to view stereoscopic images. This was developed by Autodesk's stereoscopic viewing team led by Steve Macksau in 1993. The implementation of stereoscopy had been an active topic of discussion in CAD since at least 1987, with the intention of letting architects "virtually walk through

So, I'm trying to build a hangman game but I run into a problem. When I'm drawing the grid, I want to make a random number generator that runs at the same time as the main loop, but it runs before the while loop and it makes the game for every letter. How can I make the random generator have the same effect as the while loop? Thanks in advance! Here's the full code: import random import sys import time import os import array grid_height = 10 grid_width = 10 def get_grid(grid_height, grid_width): rows = [] for y in range(grid_height): rows.append(''.join(["for i in range(grid_width)])) print(' '.join(rows)) def main(): grid_size = (grid_height
