History 1/13/2009 PeToUSB 0.1.3.7 Description
PE To USB allows you to install Windows from a USB key or stick. Using it also creates a virtual drive known as an 'auto-executable drive'. This virtual drive, like any other USB device, is supported by Windows Explorer. You can then boot from it, install Windows from it, mount it to other Windows PC's or even copy and paste files to and from it. PeToUSB 0.1.3.7 is the latest version of PeToUSB as of 21st May 2009. It features an option to view the contents of the virtual drive in Windows Explorer. Download PeToUSB is 100% clean, free of viruses and

safe. PeToUSB downloads are provided to our website by eggdrops. Virus scan processes may be initiated by the download manager.

Frequently Asked Questions PeToUSB 0.1.3.7

Does it support virtual drives such as F:\, E:\, Z:\, etc.? What additional features/plugins are supported? Yes it does. Just go to the Settings menu, from where you can choose to generate virtual drives like F:\, E:\, etc. You can also copy files to and from the virtual drive and use the Virtual machine as if you had a device. I have a FAT32 USB key. Does it support FAT32?

Windows computers require a FAT32 partition. If you choose to use FAT32, you can create a partition and format it to FAT32. If you select the file system of the virtual drive, the file system of the virtual drive is created to support

the selected file system. If you choose to use FAT32, you can create a partition and format it to FAT32. I have a USB mass storage device that contains folders. How can I make the virtual drive? If the file system of the selected USB device is FAT32, it can be supported by the virtual drive. Installation How do I install Windows?
