One young woman took to Twitter to ask for help after someone hacked her Facebook account and changed. Apply for a government job right away and upload your resume to help get you in front of potential employers.(ANSA) - MILANO, 12 NOV - Lo stivale Matteo Salvini ha annunciato nel pomeriggio il via libera al Supercongresso dopo aver ottenuto il sostegno dei grillini. "Era tempo che l'Italia dicesse basta a una classe politica'sfircata' e a una'regina' che ha segnato e che ha gettato a caro prezzo il Paese", ha detto durante una diretta Instagram.Q: MySQL data types: storage size? I am using MySQL as a database for a site (I am not using it as a front-end). I have created a table that looks like this:

CREATE TABLE IF NOT EXISTS

```
`{$dbprefix}properties` ( `property_id` int(5)
unsigned NOT NULL auto_increment, `app_id`
int(2) NOT NULL, `property_name` text NOT
NULL, `property_type` int(5) NOT NULL,
`property_value` text NOT NULL, PRIMARY KEY
(`property_id`), UNIQUE KEY `property_name`
(`property_name`) ) ENGINE=InnoDB DEFAULT
CHARSET=utf8;
```

When creating this table, I used to use the character type, but then the field values only support up to 255 chars. I changed the datatype to text because this makes it easier to manipulate the field values in PHP.

Does this have an adverse effect on the database, or is the difference small? Does the character type only store one byte per character, or two?
