Slui 4 Not Working Windows 10

The SLUI 4.0.21 doesn't work for the Windows 10 which is installed on my computer. It displays different error and it doesn't activate Windows 10. I've tried to unpack it with the WinRAR. Then it displays an error message about illegal to this directory. Then I've extracted it and transferred it into the c:\windows directory. However, I cannot execute SLUI properly. I get this error message, 'slui.exe' is not recognized as an internal or external command, operable program or batch file. I put the SLUI.exe file in the path to the Windows 7 directory to fix the issue. However, when I run a command prompt to open the file, I get the following error: 'C:\Windows\system32\cmd.exe' is not recognized as an internal or external command, operable program or batch file. I'm new to computer but for me it's the easiest way to activate my computer using a product key because I'm not familiar with the windows 10 activation process. So when I open the'slui.exe' in Windows 7 I get a dialog that says Could not display activation console. This type of install might not activate correctly. If you do not want to activate this install you can 'Close Installation' or continue to install. I click on continue, and the rest of the installation completes successfully. However, the windows was not activated. the value for the product key will vary according to the operating system that you are running. the value that you need to change is the key used by windows and represents the serial number for the product that you are activating.
